Interdependencies Breakout Question #1

- Given your hazard, what are the primary concerns with respect to interdependencies?
 - Power and transportation – primary
 - Recurring themes:
 - Residential construction – energy sector (air conditioning, heat), generators, renewable,
 - Transportation network – tree blockage, signage, lights,
 - Electric, telecommunication networks with aerial infrastructure, cell towers
 - Sectors with different ownership, government, individual commercial
 - Access to services, runs across all sectors and stakeholders
 - Non regional and commercial supply chains

Interdependencies Breakout Question #2

- How does your sector account for interdependencies with other sectors in the planning phase (not recovery)?
 - City wide plans for coordination among sectors, and own individual for each sector:
 - Power and transportation are most vulnerable. Fuel supply requires fuel, power, and transportation.
 - Building a command center, for communicating across sector
 - COOP plan – people on call, developing a call tree
 - Need to think ‘out of the box’, planning exercises and drills, table top followed by off-site testing, details can be important
 - Mitigation based on all-hazards, with focus on individual
 - Redundancy, hardening, burying infrastructure, backup power generation, transportation
 - Flooding from excess rain can disable infrastructure, such as water supply systems
 - Should understand critical facilities and how to keep powered up

Interdependencies Breakout Question #3

- How can the standing committees work together to address the interdependencies challenges that arise during this hazard event?
 - Create hazard exercise with declared damage that considers various time frames. Representatives from each committee will identify vulnerabilities and interdependencies. Use Riverbend.
 - Liaisons between the committees – with defined structure to:
 1. Represent interests of their own committees
 2. Gather information and report back.
 - Identification of capabilities and scope of expertise for each committee
